SB15-254 “Solar Multiplier Bill”

- Existing law created a 3 for 1 multiplier for solar projects for MOUs and RECs
- Multiplier was set to expire July 1, 2015
- Bill extended the multiplier for munis, so long as the new projects were under contract for development before August 1 2015 and began producing electricity before December 31, 2016

Legislative Advocacy

Comprehensive Energy Legislation is moving through Congress

APPA priorities in energy legislation:

- Self supply and mandatory capacity markets
- Grid security – cost recovery and sunshine law fix
- Reliability –FERC reliability analysis
- Hydro licensing/relicensing reform
- Energy efficiency
- Preventing federalization of distributed generation

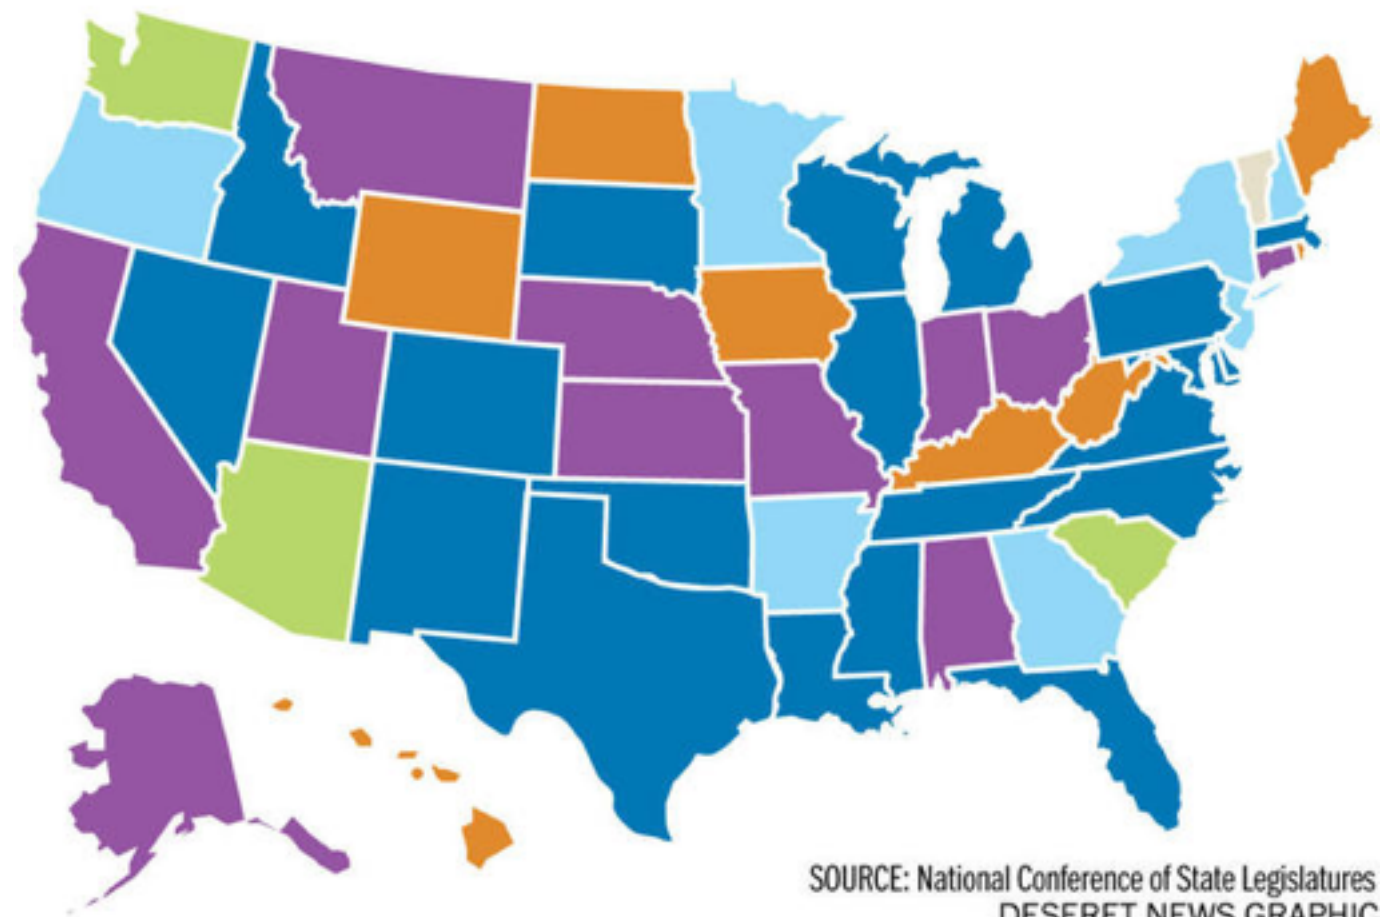

Clean Power Plan

US EPA plan to reduce national CO2 emission rates 30% below 2005 levels by 2030

- Plan released on 08/10 (4000+ pages!)
- Colorado to reduce CO2 emission rates 40% below 2012 levels by 2030

Total emission reductions percentage by 2030

EPA PROPOSED RATES, CLEAN POWER PLAN

Clean Power Plan

- How much does Colorado have to cut?
- Will we go it alone or join other states?
- What will be required of MOUs?
- What will the Colorado AG do?
- What will the Courts do?
- What can we expect after 2016?

John W. Hickenlooper
Governor

May 14, 2015

The Honorable Mitch McConnell
317 Russell Senate Office Building
Washington, DC 20510

Dear Majority Leader McConnell:

Thank you for your letter on March 19th. Out of respect for the office you hold, a thoughtful response follows.

Coloradans have a unique appreciation for what is at stake in our natural environment -- we are surrounded by some of the most beautiful scenery found anywhere in the world. In Colorado, we have a long-standing history of investing in our natural environment, with the engagement of local business and civic leaders. We have made immense strides in eliminating the "brown cloud" for which Denver and the front range of the Rockies were once famous; stunning, clear views of the Rocky Mountains have been restored to our residents and the tens of millions of visitors who come here annually.

We are also leaders in finding agreement with impacted industries on how best to improve our natural environment. Last year, we stood shoulder to shoulder with executives from our three largest oil and gas producers and leaders from local and national environmental organizations, including the Environmental Defense Fund, collaborating to establish the first in-the-nation regulation of methane emissions from oil and gas facilities. This collaborative effort will not only reduce greenhouse gas emissions, but will simultaneously improve local air quality.

Colorado is already a leader in reducing carbon emissions from power plants, on track to hit an estimated 20% reduction over 2012 emissions -- and we have done this all while keeping energy rates affordable. We will continue to engage with our industry to develop a compliant Clean Power Plan, as required by federal law.

In adopting the Clean Air Act, under which these regulations are being developed, Congress vested the states with power to develop their own plans. Although complying with the Clean Power Plan will be a challenge, states tackle problems of this magnitude on a regular basis. We think it would be irresponsible to ignore federal law, and that is why we intend to develop a compliant Clean Power Plan.

Sincerely,

A handwritten signature in black ink, appearing to read "John W. Hickenlooper".

John W. Hickenlooper
Governor of Colorado

Public Power in Colorado

There are 29 municipal utilities across Colorado that serve over 422,000 electric customers (approximately 17% of the state population). Municipal utilities are not-for-profit electric operations owned by the communities they serve. [Click here for more information about Public Power in Colorado.](#)
