BP-25-03363	Fire - Sprinkler System, Non-Res	Work includes disconnecting, removing, and capping the two existing fire department connections that were found not to hold hydrostatic pressure during a recent 5-year test, and to provide and install new 30-degree down-angle Storz Fire Department Connections at each existing fire sprinkler riser room. Piping connections will tie in and come from the three existing fire risers in the building, ensuring all systems can be supplied appropriately by an individual FDC. We will not be relocating any of the existing sprinkler mains or branch lines; all system piping, except for the fire department connections, will remain in place. There is no change to the existing hazard classification in this building. This work will not negatively affect the hydraulic demands of the existing sprinkler system, and no sprinkler locations will be affected by this work.
